TECHNICAL SPECS

Color:	Amber colored
Odor:	Ketonus
Temperature resistance:	60°C
PH value:	7
Relative density at 20°C:	0,84 (Liquid)

Instructions

Shake well before use and always keep the can vertically. Respect an ideal spraying distance of 10 to 25. For 1 side application, allow the glue to dry for 30 seconds and then apply in the correct position. For 2-sided application, allow the glue to dry for 2 to 5 minutes and then apply in the correct position and press firmly. The excess adhesive residue can be removed with MT_{CLEANER}.

At the end of use, hold the can of Sticky Spray upside down and spray thoroughly to prevent clogging of the spray head. The surfaces to be bonded must be dry, clean, dust-free, grease-free and, if possible, cleaned with MT_{CLEANER}.
