2. HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture
Classification according to Regulation (EC) 1272/2008 (CLP)

Acute toxicity, Category 4:	H332: Harmful if inhaled.
Eye irritation, Category 2:	H319: Causes serious eye irritation.
Skin sensibilisation, Category 1:	H317: May cause an allergic reaction.
STOT SE, Category 3:	H335: May cause respiratory irritation.

2.2 Label elements
Labelling according to Regulation (EC) 1272/2008 (CLP)
Hazard pictograms:

GHS07

Signal word: Warning.

Creation date: 8/06/2023

FAST TOP LEVEL (COMPONENT A)

Hazard statements:
H317 May cause an allergic reaction.
H319 Causes serious eye irritation.
H332 Harmful if inhaled.
H335 May cause respiratory irritation.

Precautionary statements:
P261 Avoid breathing vapours or spray.
P280 Wear protective gloves/ eye protection/ face protection.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P312 Call a POISON CENTRE/doctor if you feel unwell.

Hazardous components which must be listed on the label:
Calcium oxide
Polyisocyanate, aliphatic

Additional Labelling:
EUH204 Contains isocyanates. May produce an allergic reaction.

2.3 Other hazards
This mixture does not contain any vPvB substance (vPvB= very persistent, very bioaccumulative) or is not included under XIII of the regulation (EC) 1907/2006 (< 0,1 %).
This mixture does not contain any PBT substance (PBT= persistent, bioaccumulative, toxic) or is not included under XIII of the regulation (EC) 1907/2006 (< 0,1 %).
This mixture does not contain any substance with endocrine disrupting properties (< 0,1 %).

Impurities, test data and additional information may have been taken into account in classifying and labelling the product. For the text of the H-phrases and classification codes (GHS/CLP), see Section 16.
The substances named in this section are given with their actual, appropriate classification!
For substances that are listed in appendix VI, table 3.1 of the regulation (EC) no. 1272/2008 (CLP regulation) this means that all notes that may be given here for the named classification have been taken into account.

4. FIRST AID MEASURES

4.1 Description of first aid measures

General advice: First aiders should ensure they are protected! Never pour anything into the mouth of an unconscious person!
After inhalation: Supply person with fresh air and consult doctor according to symptoms.
After skin contact: Remove polluted, soaked clothing immediately, wash thoroughly with plenty of water and soap, in case of irritation of the skin (flare), consult a doctor.
After eye contact: Remove contact lenses. Wash thoroughly for several minutes using copious water. Seek medical help if necessary.
After ingestion: Rinse the mouth thoroughly with water. Give copious water to drink – consult doctor immediately.

4.2 Most important symptoms and effects, both acute and delayed

If applicable delayed symptoms and effects can be found in Section 11 and the absorption route in Section 4.1.
In certain cases, the symptoms of poisoning may only appear after an extended period/after several hours.

4.3 Indication of any immediate medical attention and special treatment needed

Symptomatic treatment.

5. FIREFIGHTING MEASURES

5.1 Extinguishing media

Suitable extinguishing media: Adapt to the nature and extent of fire. Water jet spray/foam/CO2/dry extinguisher.

Unsuitable extinguishing: None known.

5.2 Special hazards arising from the substance or mixture

In case of fire the following can develop: Oxides of carbon. Oxides of nitrogen. Hydrogen cyanide. Toxic gases.

5.3 Advice for firefighters

For personal protective equipment see Section 8. In case of fire and/or explosion do not breathe fumes. Protective respirator with independent air supply. According to size of fire. Full protection, if necessary. Cool container at risk with water. Dispose of contaminated extinction water according to official regulations.

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures

For non-emergency personnel: In case of spillage or accidental release, wear personal protective equipment as specified in Section 8 to prevent contamination. Ensure sufficient ventilation, remove sources of ignition. Avoid dust formation with solid or powder products. Leave the danger zone if possible, use existing emergency plans if necessary. Keep unprotected people away. Ensure sufficient supply of air. Avoid contact with eyes or skin. If applicable, caution – risk of slipping.

For emergency responders: See Section 8 for suitable protective equipment and material specifications.

6.2 Environmental precautions

If leakage occurs, dam up. Resolve leaks if this is possible without risk. Prevent form entering drainage system. Prevent surface and ground-water infiltration, as well as ground penetration. If accidental entry into drainage system occurs, inform responsible authorities.

6.3 Methods and material for containment and cleaning up

Soak up with absorbent material (e.g. universal binding agent, sand, diatomaceous earth, sawdust) and dispose of according to Section 13.

6.4 Reference to other sections

For personal protective equipment see Section 8 and for disposal instructions see Section 13.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling

General recommendations: Ensure good ventilation. Avoid contact with eyes or skin. Eating, drinking, smoking as well as food-storage, is prohibited in workroom. Observe directions on label and instructions for use. Use working methods according to operating instructions.

Notes on general hygiene measures at the workplace: General hygiene measures for the handling of chemicals are applicable. Wash hands before breaks and at end of work. Keep away from food, drink and animal feeding stuffs. Remove contaminated clothing and protective equipment before entering areas in which food is consumed.

7.2 Conditions for safe storage, including any incompatibilities
Keep out of access to unauthorized individuals. Not to be stored in gangways or stair wells. Store product closed and only in original packaging. Store at room temperature. Store in a dry place.

7.3 Specific end use(s)
No information available at present.

WNG 8 hours = Statutory Dutch Limit Values – Time-weighted average over 8 hours (Working Conditions Decree, Annex XIII).
DE-AGW = German limit values, A = alveol fraction (or respirable fraction), E = inhalable fraction (TRGS 900).
BE-GW = Belgian limit values.
ACGIH-TWA = American Conference of Governmental Industrial Hygienist (ACGIH) limits, TWA (time weight average), time weighted average over 8 hours.
EU = European limit values (Directive 1991/322/EEC, 1998/24/EC, 2000/39/EC, 2004/37/EC, 2006/15/EC, 2009/161/EU, 2017/164/EU and 2019/ 1831/EU).
(8) = Inhalable fraction (Directive 2017/164/EU, Directive 2004/37/EC). (9) = Respirable fraction (Directive 2017/164/EU, Directive 2004/37/EC). (11) = Inhalable fraction (Directive 2004/37/EC). (12) = Respirable

fraction. Respirable fraction in the Member States which, on the date of entry into force of this Directive, implement a biomonitoring system with a maximum biological limit value of 0.002 mg Cd/g creatinine in the urine (Directive 2004/37/EC).
WNG 15-min. = Statutory Dutch Limit Values – Time-weighted average over 15 minutes (Working Conditions Decree, Annex XIII).
DE-AGW = German limit values as an exceedance factor 1-8 and category I (substances where the local effect is decisive for the established limit value or substances that can have a sensitizing effect when inhaled) or category II (resorptive substances), A = alveol fraction (or respirable fraction), E = inhalable fraction (TRGS 900).
BE-GW = Belgian limit values.
ACGIH-STEL= American Conference of Governmental Industrial Hygienist (ACGIH) limit values, STEL (short term exposure limit), time weighted average over 15 min.
EU = European limit values (2000/39/EC, 2006/15/EC).
(8) = Inhalable fraction (2017/164/EU, 2017/2398/EU). (9) = Respirable fraction (2017/164/EU, 2017/2398/EU).
(10) = Limit value for short-term exposure in relation to a reference period of 1 minute (2017/164/EU).
WNG-C = Statutory Dutch Limit Values – Ceiling (Working Conditions Decree, Annex XIII).
BE-GW = Belgian limit values.
ACGIH-C = American Conference of Governmental Industrial Hygienist (ACGIH) limits, C (ceiling value) is a ceiling value.
BGW = Biological limit values. ACGIH-BEI = American Conference of Governmental Industrial Hygienist (ACGIH), BEI (Biological Exposure Indices), Biological Limits.
Other information: NL/DE/ACGIH/EU: H = Substances that can be absorbed relatively easily through the skin.
NL: WNG = Statutory Dutch Limit Values (Working Conditions Decree, Annex XIII).
GGS-B4 = Limit values for substances harmful to health, Annex 4 (Dutch non-exhaustive list of substances toxic to reproduction): V1A, V1B or V2 = toxic to reproduction/harmful for reproduction (Fertility) and O1A, O1B or O2 toxic to reproduction/ harmful (Development). B = May be harmful through breastfeeding.
DE: Y = substances for which a risk of fetal damage is negligible if the stated German limit value is adhered to, Z = substances for which a risk of fetal damage cannot be excluded if the stated German limit value is observed.
BE: C = carcinogenic and/or mutagenic substances, D = Substances that can be absorbed relatively easily through the skin, F = Exposure occurs in the form of fibres.
ACGIH: A1 = Proven carcinogen, A2 = Suspected carcinogen, A3 = Animal carcinogen, unknown to humans, A4 = Not known as human carcinogen, A5 = Not suspected human carcinogen, SEN = hypersensitivity reaction in susceptible people can induce, even if exposed below the stated exposure limit (DSEN = skin sensitization, RSEN = respiratory sensitization), RTD = ototoxic chemical agent.
(13) = The substance may cause skin and respiratory sensitization (Directive 2004/37/EC),
(14) = The substance may cause skin sensitization (Directive 2004/37/EC).

8.2 Exposure controls

Appropriate engineering controls: Ensure good ventilation. This can be achieved by local solution or general air extraction. If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn. Applies only if maximum permissible exposure values are listed here. Suitable assessment methods for reviewing the effectiveness of protection measures adopted include metrological and non-metrological investigative techniques. These are specified by e.g. EN 14042. EN 14042 “Workplace atmospheres. Guide for the application and use of procedures for the assessment of exposure to chemical and biological agents”.

Individual protection measures, such as personal protective equipment: General hygiene measures for the handling of chemicals are applicable. Wash hands before breaks and at end of work. Keep away from food, drink and animal feeding stuffs. Remove contaminated clothing and protective equipment before entering areas in which food is consumed.

Eye/face protection: Tight fitting protective goggles with side protection (EN 166).

Skin/hand protection: Chemical resistant protective gloves (EN ISO 374). If applicable: Protective gloves made of butyl (EN ISO 374). Protective Neoprene®/polychloroprene gloves (EN ISO 374). Protective nitrile gloves (EN ISO 374). Protective PVC gloves (EN ISO 374). Minimum layer thickness in mm: 0,5. Permeation time (penetration time) in minutes: >= 480. The breakthrough times determined in accordance with EN 16523-1 were not obtained under practical conditions. The recommended maximum wearing time is 50% of breakthrough time. Protective hand cream recommended.
Additional information on hand protection: No tests have been performed. In the case of mixtures, the selection has been made according to the knowledge available and the information about the contents. Selection of materials derived from glove manufacturer's indications. Final selection of glove material must be made taking the breakthrough times, permeation rates and degradation into account. Selection of a suitable glove depends not only on the material but also on other quality characteristics and varies from manufacturer to manufacturer. In the case of mixtures, the resistance of glove materials cannot be predicted and must therefore be tested before use. The exact breakthrough time of the glove material can be requested from the protective glove manufacturer and must be observed.
Skin protection – Other measures: Protective working garments (e.g. safety shoes EN ISO 20345, long-sleeved protective working garments).
Respiratory protection: When the limit value is exceeded (WNG of DE-AGW of BE-GW). Filter A (EN 14387), code colour brown. Filter B (EN 14387), code colour grey. Filter P3 (EN 143), code colour white. Observe wearing time limitations for respiratory protection equipment.
Thermal hazards: Not applicable.
Environmental exposure controls: No information available at present.

9. PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

Physical state:	Paste, liquid.
Colour:	White.
Odour:	Characteristic.
Melting point/freezing point:	No information available.
Boiling point/initial boiling point and boiling range:	No information available.
Flammability:	Combustible.
Lower explosion limit:	No information available.
Upper explosion limit:	No information available.
Flash point:	No information available.
Auto-ignition temperature:	No information available.
Decomposition temperature:	No information available.
pH:	No information available.
Kinematic viscosity:	55 Pas (Dynamic viscosity).

FAST TOP LEVEL (COMPONENT A)

10. STABILITY AND REACTIVITY

10.1 Reactivity
The product has not been tested.

10.2 Chemical stability
Stable with proper storage and handling.

10.3 Possibility of hazardous reactions
No dangerous reactions known.

10.4 Conditions to avoid
None known.

10.5 Incompatible materials
Avoid contact with strong alkalis. Avoid contact with strong oxidizing agents. Avoid contact with strong acids.

10.6 Hazardous decomposition products
No decomposition when used as directed.

11. TOXICOLOGICAL INFORMATION

Calcium oxide
Notes
Calcium oxide reacts with water and/or carbon dioxide to form respectively calcium dihydroxide and/or calcium carbonate, which are sparingly, and so present a low mobility in most ground.

Titanium dioxide (in powder form containing 1% or more of particles with aerodynamic diameter <=10 µm)
Notes
Negative.

12.5 Results of PBT and vPvB assessment

13. DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

For the substance/mixture/residual amounts:
EC disposal code no.:
The waste codes are recommendations based on the scheduled use of this product. Owing to the user's specific conditions for use and disposal, other waste codes may be allocated under certain circumstances. (2014/955/EU)
08 04 09 waste adhesives and sealants containing organic solvents or other hazardous substances.
Recommendation:
Sewage disposal shall be discouraged. Pay attention to local and national official regulations. E.g. suitable incineration plant. E.g. dispose at suitable refuse site.
For contaminated packing material: Pay attention to local and national official regulations. Empty container completely. Uncontaminated packaging can be recycled. Dispose of packaging that cannot be cleaned in the same manner as the substance.

14. TRANSPORT INFORMATION

14.1 UN number or ID number

ADR/RID: Not applicable.
IMDG: Not applicable.

14.6 Special precautions for user
Unless specified otherwise, general measures for safe transport must be followed.

14.7 Maritime transport in bulk according to IMO instruments
Non-dangerous material according to Transport Regulations.

15. REGULATORY INFORMATION

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture
Observe restrictions:
Comply with national regulations/laws governing the protection of young people at work (national implementation of the Directive 94/33/EC)!
Regulation (EC) No 1907/2006, Annex XVII
Polyisocyanate, aliphatic
Comply with trade association/occupational health regulations.
Directive 2010/75/EU (VOC): 0%
Water hazard category according to the General Assessment Method (ABM) 2016: B(4)
Naleven van het Arbeidsomstandighedenbesluit (met name artikel 4.105 en 4.106 – Jeugdige werknemers) (Nederland).

15.2 Chemical safety assessment
A chemical safety assessment is not provided for mixtures.

16. OTHER INFORMATION

Classification and processes used to derive the classification of the mixture in accordance with the ordinance (EC) 1272/2008 (CLP):

Classification in accordance with regulation (EC) No 1272/2008 (CLP)	Evaluation method used
Acute Tox. 4, H332	Classification according to calculation procedure.
Eye Irrit. 2, H319	Classification according to calculation procedure.
STOT SE 3, H335	Classification according to calculation procedure.
Skin Sens. 1, H317	Classification according to calculation procedure.

The following phrases represent the posted Hazard Class and Risk Category Code (GHS/CLP) of the product and the constituents (specified in Section 2 and 3):

H315 Causes skin irritation.
H317 May cause an allergic reaction.
H318 Causes serious eye damage.
H319 Causes serious eye irritation.
H332 Harmful if inhaled.
H335 May cause respiratory irritation.
H351 Suspected of causing cancer by inhalation.

Acute Tox.: Acute toxicity – Inhalation.
Eye Irrit.: Eye irritation.
STOT SE: Specific target organ toxicity – single exposure – respiratory tract irritation.
Skin Sens.: Skin sensitization.
Skin Irrit.: Skin irritation.
Eye Dam.: Serious eye damage.
Carc.: Carcinogenicity.

2. HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture

Classification according to Regulation (EC) 1272/2008 (CLP)
Eye irritation, Category 2: H319: Causes serious eye irritation.

2.2 Label elements

Labelling according to Regulation (EC) 1272/2008 (CLP)
Hazard pictograms:

GHS07

Signal word: Warning.

Hazard Statements:
H319 Causes serious eye irritation.
H332 Harmful if inhaled.
H335 May cause respiratory irritation.

Precautionary statements:
P280 Wear eye protection/face protection.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P337+P313 If eye irritation persists: Get medical advice/attention.

2.3 Other hazards
This mixture does not contain any vPvB substance (vPvB= very persistent, very bioaccumulative) or is not included under XIII of the regulation (EC) 1907/2006 (< 0,1 %).
This mixture does not contain any PBT substance (PBT= persistent, bioaccumulative, toxic) or is not included under XIII of the regulation (EC) 1907/2006 (< 0,1 %).
This mixture does not contain any substance with endocrine disrupting properties (< 0,1 %).

3. COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substances
Not applicable.

3.2 Mixtures

1,1',1'',1'''-ethylenedinitrilotetrapropan-2-ol	
Registration number (REACH)	01-2119552434-41-XXXX
Index	---
EINECS, ELINCS, NLP, REACH-IT List-No.	203-041-4
CAS	102-60-3

Classification according to Regulation (EC) 1272/2008 (CLP), M-Factors	Eye Irrit. 2, H319

For the text of the H-phrases and classification codes (GHS/CLP), see Section 16.
The substances named in this section are given with their actual, appropriate classification!
For substances that are listed in appendix VI, table 3.1 of the regulation (EC) no. 1272/2008 (CLP regulation) this means that all notes that may be given here for the named classification have been taken into account.

4. FIRST AID MEASURES

4.1 Description of first aid measures
General advice: First aiders should ensure they are protected! Never pour anything into the mouth of an unconscious person!
After inhalation: Supply person with fresh air and consult doctor according to symptoms.
After skin contact: Remove polluted, soaked clothing immediately, wash thoroughly with plenty of water and soap, in case of irritation of the skin (flare), consult a doctor.
After eye contact: Remove contact lenses. Wash thoroughly for several minutes using copious water. Seek medical help if necessary.
After ingestion: Rinse the mouth thoroughly with water. Give copious water to drink – consult doctor immediately.

4.2 Most important symptoms and effects, both acute and delayed
If applicable delayed symptoms and effects can be found in Section 11 and the absorption route in Section 4.1. In certain cases, the symptoms of poisoning may only appear after an extended period/after several hours.

4.3 Indication of any immediate medical attention and special treatment needed
Symptomatic treatment.

5. FIREFIGHTING MEASURES
5.1 Extinguishing media
Suitable extinguishing media: Adapt to the nature and extent of fire. Water jet spray/foam/CO2/dry extinguisher.
Unsuitable extinguishing: None known.

5.2 Special hazards arising from the substance or mixture
In case of fire the following can develop: Oxides of carbon. Toxic gases.

5.3 Advice for firefighters
For personal protective equipment see Section 8. In case of fire and/or explosion do not breathe fumes. Protective respirator with independent air supply. According to size of fire. Full protection, if necessary. Cool container at risk with water. Dispose of contaminated extinction water according to official regulations.

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures
For non-emergency personnel: In case of spillage or accidental release, wear personal protective equipment as specified in Section 8 to prevent contamination. Ensure sufficient ventilation, remove sources of ignition. Avoid dust formation with solid or powder products. Leave the danger zone if possible, use existing emergency plans if necessary. Keep unprotected people away. Ensure sufficient supply of air. Avoid contact with eyes or skin. If applicable, caution – risk of slipping.
For emergency responders: See Section 8 for suitable protective equipment and material specifications.

6.2 Environmental precautions
If leakage occurs, dam up. Resolve leaks if this is possible without risk. Prevent form entering drainage system. Prevent surface and ground-water infiltration, as well as ground penetration. If accidental entry into drainage system occurs, inform responsible authorities.

6.3 Methods and material for containment and cleaning up
Soak up with absorbent material (e.g. universal binding agent, sand, diatomaceous earth, sawdust) and dispose of according to Section 13.

6.4 Reference to other sections
For personal protective equipment see Section 8 and for disposal instructions see Section 13.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling

General recommendations: Ensure good ventilation. Avoid contact with eyes or skin. Eating, drinking, smoking as well as food-storage, is prohibited in workroom. Observe directions on label and instructions for use. Use working methods according to operating instructions.

Notes on general hygiene measures at the workplace: General hygiene measures for the handling of chemicals are applicable. Wash hands before breaks and at end of work. Keep away from food, drink and animal feeding stuffs. Remove contaminated clothing and protective equipment before entering areas in which food is consumed.

7.2 Conditions for safe storage, including any incompatibilities

Keep out of access to unauthorized individuals. Not to be stored in gangways or stair wells. Store product closed and only in original packaging. Store at room temperature. Store in a dry place.

7.3 Specific end use(s)

No information available at present.

DE-AGW = German limit values as an exceedance factor 1-8 and category I (substances where the local effect is decisive for the established limit value or substances that can have a sensitizing effect when inhaled) or category II (resorptive substances), A = alveol fraction (or respirable fraction), E = inhalable fraction (TRGS 900).
BE-GW = Belgian limit values.
ACGIH-STEL= American Conference of Governmental Industrial Hygienist (ACGIH) limit values, STEL (short term exposure limit), time weighted average over 15 min.
EU = European limit values (2000/39/EC, 2006/15/EC).
(8) = Inhalable fraction (2017/164/EU, 2017/2398/EU). (9) = Respirable fraction (2017/164/EU, 2017/2398/EU).
(10) = Limit value for short-term exposure in relation to a reference period of 1 minute (2017/164/EU).
WNG-C = Statutory Dutch Limit Values – Ceiling (Working Conditions Decree, Annex XIII).
BE-GW = Belgian limit values.
ACGIH-C = American Conference of Governmental Industrial Hygienist (ACGIH) limits, C (ceiling value) is a ceiling value.
BGW = Biological limit values. ACGIH-BEI = American Conference of Governmental Industrial Hygienist (ACGIH), BEI (Biological Exposure Indices), Biological Limits.
Other information: NL/DE/ACGIH/EU: H = Substances that can be absorbed relatively easily through the skin.
NL: WNG = Statutory Dutch Limit Values (Working Conditions Decree, Annex XIII).
GGS-B4 = Limit values for substances harmful to health, Annex 4 (Dutch non-exhaustive list of substances toxic to reproduction): V1A, V1B or V2 = toxic to reproduction/harmful for reproduction (Fertility) and O1A, O1B or O2 toxic to reproduction/ harmful (Development). B = May be harmful through breastfeeding.
DE: Y = substances for which a risk of fetal damage is negligible if the stated German limit value is adhered to, Z = substances for which a risk of fetal damage cannot be excluded if the stated German limit value is observed.
BE: C = carcinogenic and/or mutagenic substances, D = Substances that can be absorbed relatively easily through the skin, F = Exposure occurs in the form of fibres.
ACGIH: A1 = Proven carcinogen, A2 = Suspected carcinogen, A3 = Animal carcinogen, unknown to humans, A4 = Not known as human carcinogen, A5 = Not suspected human carcinogen, SEN = hypersensitivity reaction in susceptible people can induce, even if exposed below the stated exposure limit (DSEN = skin sensitization, RSEN = respiratory sensitization), RTD = ototoxic chemical agent.
(13) = The substance may cause skin and respiratory sensitization (Directive 2004/37/EC),
(14) = The substance may cause skin sensitization (Directive 2004/37/EC).

8.2 Exposure controls

Appropriate engineering controls: Ensure good ventilation. This can be achieved by local solution or general air extraction. If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn. Applies only if maximum permissible exposure values are listed here. Suitable assessment methods for reviewing the effectiveness of protection measures adopted include metrological and non-metrological investigative techniques. These are specified by e.g. EN 14042. EN 14042 “Workplace atmospheres. Guide for the application and use of procedures for the assessment of exposure to chemical and biological agents”.

Individual protection measures, such as personal protective equipment: General hygiene measures for the handling of chemicals are applicable. Wash hands before breaks and at end of work. Keep away from food, drink and animal feeding stuffs. Remove contaminated clothing and protective equipment before entering

areas in which food is consumed.
Eye/face protection: Tight fitting protective goggles with side protection (EN 166).
Skin/hand protection: Chemical resistant protective gloves (EN ISO 374). If applicable: Protective gloves made of butyl (EN ISO 374). Protective Neoprene®/polychloroprene gloves (EN ISO 374). Protective nitrile gloves (EN ISO 374). Protective PVC gloves (EN ISO 374). Minimum layer thickness in mm: 0,5. Permeation time (penetration time) in minutes: >= 480. The breakthrough times determined in accordance with EN 16523-1 were not obtained under practical conditions. The recommended maximum wearing time is 50% of breakthrough time. Protective hand cream recommended.
Additional information on hand protection: No tests have been performed. In the case of mixtures, the selection has been made according to the knowledge available and the information about the contents. Selection of materials derived from glove manufacturer's indications. Final selection of glove material must be made taking the breakthrough times, permeation rates and degradation into account. Selection of a suitable glove depends not only on the material but also on other quality characteristics and varies from manufacturer to manufacturer. In the case of mixtures, the resistance of glove materials cannot be predicted and must therefore be tested before use. The exact breakthrough time of the glove material can be requested from the protective glove manufacturer and must be observed.
Skin protection – Other measures: Protective working garments (e.g. safety shoes EN ISO 20345, long-sleeved protective working garments).
Respiratory protection: Normally not necessary.
Thermal hazards: Not applicable.
Environmental exposure controls: No information available at present.

9. PHYSICAL AND CHEMICAL PROPERTIES

13. DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

For the substance/mixture/residual amounts:

EC disposal code no.:

The waste codes are recommendations based on the scheduled use of this product. Owing to the user's specific conditions for use and disposal, other waste codes may be allocated under certain circumstances. (2014/955/EU)

08 04 09 waste adhesives and sealants containing organic solvents or other hazardous substances.

Recommendation:

Sewage disposal shall be discouraged. Pay attention to local and national official regulations. E.g. suitable incineration plant. E.g. dispose at suitable refuse site.

For contaminated packing material: Pay attention to local and national official regulations. Empty container completely. Uncontaminated packaging can be recycled. Dispose of packaging that cannot be cleaned in the same manner as the substance.

Non-dangerous material according to Transport Regulations.

15. REGULATORY INFORMATION

15.1 Safety, health and environmental regulations/legislations specific for the substance or mixture
Observe restrictions:
Comply with trade association/occupational health regulations.
Directive 2010/75/EU (VOC): < 0,3%
Water hazard category according to the General Assessment Method (ABM) 2016: B(4)
Compliance with the Working Conditions Decree (in particular Articles 4.105 and 4.106 – Young employees) (Netherlands).

15.2 Chemical safety assessment
A chemical safety assessment is not provided for mixtures.

16. OTHER INFORMATION

Classification and processes used to derive the classification of the mixture in accordance with the ordinance (EC) 1272/2008 (CLP):

Classification in accordance with regulation (EC) No 1272/2008 (CLP)	Evaluation method used
Eye Irrit. 2, H319	Classification according to calculation procedure.

The following phrases represent the posted Hazard Class and Risk Category Code (GHS/CLP) of the product and the constituents (specified in Section 2 and 3):
H319 Causes serious eye irritation.

Eye Irrit.: Eye irritation.
